

PROJECT PROPOSAL

LearnHub - Online Learning Platform

1. Introduction

This project is a web-based learning platform called LearnHub. It provides online video courses and free learning documents for students to improve their programming and computer science skills.

2. Problem Statement

Many students face difficulty finding structured and organized learning materials in one place. They often need multiple websites to learn different topics.

3. Objectives

- To develop an online learning system - To provide video courses and documents - To allow easy access to learning materials - To improve student self-learning ability

4. Features

- User registration and login - Browse and watch video courses - Access free documents - Course categorization - Admin management system

5. Technologies Used

- Laravel (Backend Framework) - MySQL (Database) - Tailwind CSS (UI Design) - JavaScript - Livewire (if applicable)

6. Conclusion

This project aims to create an easy-to-use learning platform that helps students access educational content efficiently and improve their skills.
